

Poland Local School District High School Stadium Poland, Ohio

The Poland Seminary High School Stadium project consists of a new 3,000 seat home-side grandstand with new concessions, restrooms, equipment storage and combined ticket and security facilities integrated within its structure. The upper portion of the gateway becomes the press box and the entire facility is constructed with colored concrete block to create the historic appearance of brick with less expense.

A pedestrian concourse within the gateway provides secured access to all areas and encourages public gatherings prior to, during and after each event. The \$3 million facility also includes new synthetic turf system, renovated locker & training rooms, new public address system, and 240 space parking lot.
