

## Struthers City School District High School, Wellness Center & Stadium Struthers, Ohio

The Struthers High School project is a new grade 9 thru 12 facility connected to an existing area landmark athletic field house. The connector component provides accessible access to five individual levels of the two facilities. It was constructed while the adjacent school remained in operation at a cost of \$11 million. Designed while partner with HSA.

The Struthers Wellness Center is a 6,000 square foot training facility with new home lockers & concessions. It is also connected to the high school as part of their physical education development. Cost \$420,000.

The Athletic Stadium master plan is a proposed 4-phase strategic plan to install new synthetic field turf, replace home & visitor grandstands, and construct new lockers, restrooms, concessions and storage. The final phase would add a 20,000 square foot athletic training center for winter and spring sports.
